EXPECTED SALARY

NT$ 800K ~ 900K / year

AUTOBIOGRAPHY

Hi, My name is Ting-Wei Lin. I am a web frontend engineer. I present the view and data on web browser , and handle data exchange between browser and server. In my eyes frontend developer is the awesome stuffing in sandwich cookie. Sometimes Extruded, sometimes so sweet.

Begin from A daydream

My Major was communication engineering at University, but I wanted to be another J.K. Rowling. I gave up studying when M.A. Program, then followed my dream.

However, Reality is always Cruel

Novelist road is so difficult that I had no money life in that time. Importantly, my family was worried about me. In that time, visual designer was a famous career (also now), and I intended to be one to them. When I was a junior visual designer, I just understood salary of them is not good in Taiwan. After That, I joined a team of Internet Marketing, and got to know some basic HTML CSS which used for marketing campaign in website. Next, I builded a personal website, and jump into the trend of web frontend developing.

After growing in three years, seed grow into a tree , HTML, CSS, JS to Jquery and AngularJS, then combine SCSS and Webpack. Now, I have talent of Reactjs, Angular-6+ and Vuejs, job experience in Angular and Vue, and personal side project experience in React. I think I am a Really Frontend Guy now. But, I know it's not enough.

People Could Keep their Life In Suffering, but always Died in Ease Living.

I found there are two career that I can handle and grow up : Full Stack Nodejs engineer and React Native App engineer. I like building visual more than server handling , so I choose to become React Native app developer first.

Future is always a unknown number

Technology of Cross platform App is competitive, maybe Flutter is next star ? Even through It's base on Dart language. Anyway, future is a unknown number, waiting for our exploring.
